POWER END REFRAME PROGRAM

A customized approach to the lifecycle of your power end

Enhance the health and longevity of your fleet by bringing your old power ends back to life with ValTek's Power End Reframe Program. Power end restoration increases peace of mind and confidence with improved reliability and performance out in the field.

The program provides a customizable approach to power end service by integrating into the larger, ongoing preventative maintenance schedule of your fleet. By participating in this program, customers have the opportunity to control their spend and better forecast CapEx spending with a customized, tailored approach to power end maintenance.

HOW IT WORKS:

When the purchase of a new power end isn't mandatory, ValTek offers its reliable reframe package to not only keep costs down but also maintain high-performance and reliability in the field.

- Power end inspection and evaluation of parts
- Provide a new and robust ValTek power end frame
- Reassemble power end with recovered or new internal components

PARTS INCLUDED:

- New frame, seals, gaskets, pinion and connecting rod bearings
- Conversion of existing crankshaft to fit ValTek frame
- Modification of bull gears and pinions to fit ValTek frame if necessary
- Main crankshaft bearings – optional upgrade

WARRANTY:

We stand behind the superior quality and integrity of our work by including:

- 6-month warranty on workmanship
- 12-month warranty on power end frames

These frames endure the same inspection and testing protocol as a new power end, and we provide expedited shipping to any district, further reducing downtime.

ValTek is a one-stop-shop servicing any OEM pump at our newly upgraded service facility in Odessa, TX.

Increase the reliability and performance of your equipment through ValTek's customizable Power End Reframe Program.
