

PUMPS

BLACK DIAMOND HYDROSTATIC TESTING PUMP

Whether testing pipe and blowout prevention equipment or maintaining adjacent well pressure during hydraulic fracturing operations, the Black Diamond Hydrostatic Tester delivers unsurpassed performance, versatility and cost efficiency. Testing that typically takes an hour can easily be completed in 60 seconds, with only one operator.

STANDARD FEATURES

- Available in two different fluid-end configurations that deliver 8,000
- Features the exclusive GD Energy Products Pressure-Trol Valve system, allowing a single operator to control pressure and direct flow via a simple lever and rotary knob, without ever disengaging the clutch or stopping the engine
- The smaller footprint allows it to be permanently mounted to a skid or gooseneck trailer, completely self-sustained with one or two 225-gallon stainless-steel water tanks
- The Black Diamond's design eliminates the need for the operator to start and stop the engine, thus preventing premature wear on components and extending the life of the equipment

RENTAL FLEET PROGRAM

With our new location in Pasadena and partnerships around the U.S., GD Energy Products can help support all your hydrostatic testing operations.
