PLUNGERS

COMPATIBLE WITH ANY FLUID END MODEL

GD Energy Products manufactures high-quality OEM parts and consumables, including industry-leading plungers, available to fit any manufacturer's pump. Our plungers, like all our consumables, meet the same rigorous quality standards as our pumps and fluid ends. We manage the entire manufacturing process in-house, from material sourcing and rough machining to spray and fuse, and the final coating. Our facility is 100% dedicated to excellence in plunger manufacturing, ensuring superior performance and reliability.

STANDARD FEATURES

- High quality GD OEM parts
- Nickel and tungsten coating options
- Available sizes 3.5-in to 5-in to fit most fluid ends in the market
- Robotics allow for consistent high quality coatings
- New and remanufactured options available

PLUNGER REMANUFACTURING PROGRAM

RESTORE YOUR PLUNGERS TO OEM QUALITY

GD Energy Products state-of-the-art plunger remanufacturing program offers a convenient service that recycles, refinishes, and transforms your used plungers into OEM quality and ready for a new life. We will bring a collection bin to your location for storing used plungers, and set-up a schedule to pick them up and leave a new bin.

After receipt, used plungers are machined back to the bare metal specifications, recoated, and refinished to ensure the same quality finish as our new plungers.

SITE**

4

Finished plungers stored in GDEP warehouse or delivered straight back to your yard

1

Load your used plungers into dedicated bin

2

GDEP collects used plungers from your yard when bin is full

3

GDEP machines the used plungers back to the bare metal specifications, where they enter a proprietary coating process, and go through final machining to ensure quality OEM finish
